PROFESSIONAL SUMMARY

Computer Science graduate with a background in systems and backend software development. Experienced in designing microservices, systems programming, and building scalable backend services. Focused on writing clean, efficient code that solves real problems and drives measurable impact.

EDUCATION

Sonoma State University

3.5 GPA

Bachelor of Science in Computer Science

2025

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, Programming Languages, Software Engineering, Machine Learning

TECHNICAL PROJECTS

Redis-mini | *Go, Concurrency, Networking, Backend, Databases*

- Built a concurrent, in-memory key-value database that accepts client connections over TCP, using goroutine-based request handling and read/write mutexes to support multiple simultaneous client sessions under concurrent load.
- Designed unit tests covering invalid input handling, state integrity, and concurrent access under load.

Secure API Gateway Microservice | *Go, Microservices, API, Security*

- Designed and implemented a network-facing authentication and authorization gateway in Go as a RESTful API.
- Implemented PASETO tokens and Argon2 password hashing to protect user credentials and prevent unauthorized access.
- Developed role-based access control middleware that authorizes every request, scoping data and actions to each user's permission level.

C-Like Language Interpreter | *C++, Systems*

- Designed and built a full language interpreter in C++ from scratch, taking source code from raw text to running output.
- Implemented every stage of the language pipeline: a state-driven tokenizer for lexical analysis, a recursive descent parser, an abstract syntax tree to represent program structure, a symbol table for scope resolution, and the tree-walking evaluator.

Cervical Spine Fracture Detection | *Python, ML*

- Built a two-stage deep learning pipeline for cervical spine fracture detection, combining YOLO-based vertebrae localization with a TensorFlow classification model for per-vertebra fracture identification.
- Collaborated in a team with a fast-paced timeline, held weekly meetings, delegated responsibilities across project objectives, and delivered a working end-to-end pipeline.

EXPERIENCE

DataAnnotation

May 2024 – Present

Code Quality Analyst

Remote

- Reviewed and debugged code across Python, JavaScript, C++, and Java, identifying logic bugs, performance issues, and security flaws.
- Evaluated API usage, edge cases, and error handling to ensure correctness against detailed technical specifications.

CERTIFICATIONS

CompTIA Security+ (Earned April 2026), **Google Cybersecurity Professional**

SKILLS

Programming Languages: C++, C#, Go, Python, Java, JavaScript, TypeScript, PowerShell, Bash

Tools & Methodologies: Git/Github, Agile, RESTful APIs, Object-Oriented Programming, CI/CD, VSCode

Cloud & Infrastructure: AWS, Docker, SQL, Virtual Machines

Operating Systems: Windows, Linux, macOS

Networking: IP, TCP/UDP, DNS, HTTP/HTTPS, TLS
